

August 2026 Social Media Report

Mark Vena and SmartTechCheck

August 1 through August 30, 2026

This report lists the August 1 through August 30 posts that are individually shown in the supplied Metricool report. It excludes every August 31 entry. The source gives full-month totals through August 31, but its post tables show ranked subsets, not a complete export of all 307 posts.

Executive summary

Metricool reports 307 posts for August 1 through August 31: 43 Facebook posts, 40 Instagram posts, 133 X posts, 76 LinkedIn posts, and 15 YouTube videos. Because the report does not provide a day-by-day export, an exact August 1 through August 30 aggregate cannot be calculated from the source.

The post-level tables contain 98 distinct linked entries dated August 1 through August 30 after duplicate URLs are removed: 27 Facebook, 27 Instagram, 29 LinkedIn, and 15 YouTube. The source does not include an itemized X post table, so no X rows can be extracted.

The available text centers on enterprise AI, AI infrastructure, devices, gaming, and leadership. Frequently named organizations include Apple, Samsung Electronics, HP, NVIDIA, Google, Qualcomm, Synaptics, and Red Hat. Many Facebook, Instagram, and LinkedIn captions are shortened with ellipses in the Metricool tables. Those entries are marked as truncated below.

Method and limitations

Rows come from Metricool's channel ranking tables and its recent-post table. Publication times are reproduced as shown, with no time zone stated in the source. Each link is the URL embedded behind Metricool's Go label. A caption marked Truncated in source ends where Metricool ends it. Unavailable means the source displays a dash. Organizations are identified only from the visible caption or video title. Cross-posts stay as separate channel rows.

Facebook

27 distinct linked entries are available in the source tables for this channel.
