October 2026 Social Media Report

Mark Vena | SmartTech Research Reporting period October 1 through October 31 2026

Executive summary

Metricool reports 380 posts across five channels. This document recovers 105 distinct October publications with source embedded URLs. The PDF contains selected ranking tables, not a complete post archive. The remaining 275 reported publications have no individual rows recoverable from this source.

Channel	Reported activity	Recovered rows	Not individually listed
Facebook	42	30	12
Instagram	42	28	14
X / Twitter	191	0	191
LinkedIn	82	24	58
YouTube	23	23	0
Total	380	105	275

The 380 total includes 35 posts and 7 reels on each of Facebook and Instagram. X represents 50.3% of reported activity, although its section contains aggregate data only. Posting activity declined 11.83% against the comparison shown by Metricool. Source pages 5, 14, 19, 27, 36, 41, 42 and 50.

AI infrastructure and power, physical and edge AI, mobile computing, and business applications of AI recur in the recoverable captions and video titles. Apple is explicitly named in 13 rows, Infineon in 7, NVIDIA in 6 and HPE in 4. These are visible text counts across channel rows, not full month company totals or unique campaign counts.

Scope and reading guide

Source: 6695453-20261001-Markvenatechguy-kcqecygl.pdf, 64 pages. Its cover confirms October 1 through October 31, 2026. The August filename and /mnt/data path in the request were not available in this session. The uploaded October report is the basis for this document.

Dates and times are reproduced as printed. The PDF does not identify a timezone, so no timezone conversion has been applied. All 105 recovered entries have publication dates, times and original post URLs. Links are extracted from PDF annotations and have not been independently checked for current availability.

Text is limited to what the PDF exposes. Ellipses remain where Metricool truncates captions or titles. Three LinkedIn entries display only a dash and are flagged unavailable. YouTube text is a title, not a video description. A visible title without ellipses is labeled accordingly. Other text without ellipses is not assumed to be a complete caption.

Repeated appearances of the same URL have been consolidated, keeping the most complete visible text and all source page references. Different URLs remain separate, even if their text matches. Three September YouTube videos in the revenue ranking on page 56 are excluded from October posting activity.

Company fields name only organizations identifiable in the recovered text. A product name alone is not used to infer its manufacturer. Partial names and handles remain unresolved. “Not identifiable” means the available excerpt is insufficient, not that the original post mentioned no company. Minor PDF line wrapping within obvious words and handles has been joined. LinkedIn markup remains where the PDF exposes it.

Matching-content labels C01 through C14 identify conservative same-day matches across channels based on shared visible opening text. These labels help compare distribution but do not claim that the complete captions were identical. All channel rows remain in the inventory.

Notable content patterns

The visible record includes Apple foldable and smart home commentary, Infineon power and physical AI coverage, NVIDIA infrastructure announcements, and HPE networking commentary. Late-month YouTube titles add Synaptics edge AI and Calix broadband marketing and customer service. Thinkers360 recognition appears on Facebook, Instagram and LinkedIn. Truncated excerpts prevent a complete topic or company census.

X / Twitter

Metricool reports 191 posts on pages 5 and 41. No individual X post text, publication timestamp or URL appears in the detailed tables. No X rows have been fabricated.
