

September 2026 Social Media Report

Mark Vena and SmartTechCheck

September 1 through September 30, 2026

This report lists the September 1 through September 30 posts that are individually shown in the supplied Metricool report. The source covers the full requested month, but its post tables show ranked subsets, not a complete export of all 431 posts.

Executive summary

Metricool reports 431 posts for September 1 through September 30: 59 Facebook posts, 57 Instagram posts, 216 X posts, 73 LinkedIn posts, and 26 YouTube videos.

The post-level tables contain 105 distinct linked entries dated September 1 through September 30 after duplicate URLs are removed: 28 Facebook, 31 Instagram, 24 LinkedIn, and 20 YouTube. 2 X entries are available in the recent-post table. The source does not include a full itemized X ranking table, so these are only the linked X entries shown there.

The available text centers on enterprise AI, foldable devices, data-center power, RFID, semiconductors, and technology media coverage. Frequently named organizations include Apple, Qualcomm, NVIDIA, Red Hat, Infineon Technologies, Adobe, Dell, and Impinj. Many Facebook, Instagram, and LinkedIn captions are shortened with ellipses in the Metricool tables. Those entries are marked as truncated below.

Method and limitations

Rows come from Metricool's channel ranking tables and its recent-post table. Publication times are reproduced as shown, with no time zone stated in the source. Each link is the URL embedded behind Metricool's Go label. A caption marked Truncated in source ends where Metricool ends it. Unavailable means the source displays a dash. Organizations are identified only from the visible caption or video title. Cross-posts stay as separate channel rows.

Facebook

28 distinct linked entries are available in the source tables for this channel.
